3.Actionable Recommendations

Based on the completed dashboard, you provide recommendations by analyzing the charts and tables. Include a dedicated **Text Box** visual on the Overview page for this summary.

Actionable Recommendations should follow this structure:

- ¹ **Observation:** *What does the data show? (e.g., "The CPA for the 45+ Age group is \$25.00.")*
- ² **Insight:** *Why is this happening? (e.g., "This group is clicking but not converting.")*
- ³ **Recommendation:** *What should the team do? (e.g., "Pause ads for this age group, or test a new ad creative/landing page specifically tailored to their needs to lower CPA.")*

Example Recommendation Focus Areas:

- **Budget Shift:** Use the **Detailed Performance Table** to recommend shifting budget from low $\text{\$}\text{\textit{ROAS Proxy}}$ campaigns to high $\text{\$}\text{\textit{ROAS Proxy}}$ campaigns.
- **Creative Test:** Use the **Audience Segmentation Chart** to recommend testing a different creative for a high-spend, low-conversion audience segment.
- **Trend Check:** Use the **Line Chart** to determine if conversions are dropping at the end of the reporting period, which may signal ad fatigue or budget depletion.
